

What will be printed by the code when `Main()` is invoked?

```
public static void Main (string[] args) {  
    string angry = "SIT DOWN NOW!";  
    string announcement = angry;  
    announcement = "Please take your seat.";  
    Console.WriteLine(angry);  
}
```

Nothing is printed

SIT DOWN NOW!

angry

Please take your seat.

Correct! Strings are immutable, so `angry` is not modified when `announcement` is modified.
