

Review

Great job! You just learned about how to work with textual data in a few different ways:

How to save char and string values to a variable.

Use the addition symbol (`+`) to concatenate strings.

Interpolate strings for easier string construction.

Find information about a string using `.Length` and `.IndexOf()`.

Grab characters and parts of strings using bracket notation and `.Substring()`.

Use built-in methods such as `.ToUpper()` and `.ToLower()` to manipulate strings.

Now use what you've learned to write a short program! Some ideas:

Write a program that randomly converts part of a text to uppercase and lowercase to look like [randomcase](#).

Write a program that takes in a series of random words to construct an automated poem, in the style of e.e. cummings.
