

Why will this code cause an error?

```
interface IPersonable
{
    DateTime BirthDate { get; }
    string FullName { get; }
}

class Passport : IPersonable
{}
```

The interface is missing member implementations.

Interfaces cannot contain properties.

IPersonable is not a legal interface name.

The **Passport** class does not correctly implement the interface.

Correct! **Passport** needs to implement the two properties.
