

What will be printed by the code when `Main()` is invoked?

```
class Program
{
    public static void Main()
    {
        Book b = new Book();
        Console.WriteLine(b);
    }
}

class Book
{
    public override string ToString()
    {
        return "I'm a book!";
    }
}
```

System.Book

Nothing is printed

Book

I'm a book!

Correct! When a non-string object is printed with `Console.WriteLine()`, its `ToString()` method is called.
