When `Main()` is run, what will be printed to the console?

```
class Program {
  public static void Main (string[] args) {
    Player p = new Player();
  }
}

class Player
{
  public Player(string name)
  {
    Console.WriteLine($"Player named: {name}");
  }

  public Player() : this("n/a")
  {}
}
```

"Player named:"

"Player named: name"

"Player named: n/a"

Nothing will be printed

👏 Correct! The second constructor calls the first constructor with "n/a" as an argument.
